

Principles of System Administration

Jan Schaumann
jschauma@netmeister.org

February 1, 2017

Contents

Preface to the preface	i
Preface	ii
I Introduction and General Concepts	1
1 Introduction	2
1.1 What exactly does a System Administrator do?	3
1.2 The Profession of System Administration	6
1.3 System Administration Education	9
1.3.1 Challenges in System Administration Education	11
1.4 The Three Pillars of Exceptional System Design	13
1.4.1 Scalability	14
1.4.2 Security	16
1.4.3 Simplicity	19
1.5 The Future of System Administration	20
Problems and Exercises	23
Problems	23
Exercises	24
2 Unix	28
2.1 Unix History	28
2.1.1 The Operating System	28
2.1.2 Networking	35
2.1.3 Open Source	37
2.2 Basic Unix Concepts and Features	38

<i>CONTENTS</i>	2
2.2.1 The shell	39
2.2.2 Manual pages and documentation	42
2.2.3 A portable, multitasking, multiuser system	44
2.2.4 The Unix Philosophy	46
Problems and Exercises	50
Exercises	51
3 Documentation Techniques	55
3.1 System Documentation Writing 101	56
3.1.1 Know Your Audience	56
3.2 Online Documentation	58
3.3 Different Document Types	59
3.3.1 Processes and Procedures	60
3.3.2 Policies	61
3.3.3 Online Help and Reference	62
3.3.4 Infrastructure Architecture and Design	63
3.3.5 Program Specification and Software Documentation . .	64
3.4 Collaboration	65
3.5 Formats	66
Problems and Exercises	68
II Fundamental Technologies and Concepts	70
4 Of File Systems and Storage Models	74
4.1 Introduction	74
4.2 Storage Models	76
4.2.1 Direct Attached Storage	76
4.2.2 Network Attached Storage	78
4.2.3 Storage Area Networks	80
4.2.4 Cloud Storage	83
4.2.5 Storage Model Considerations	86
4.3 Disk Devices and Interfaces	87
4.3.1 Physical Disk Structure	90
4.4 Dividing and Combining Disks	92
4.4.1 Partitions	93

4.4.2	Logical Volumes	97
4.4.3	RAID	99
4.5	File Systems	106
4.5.1	File System Types	106
4.6	File System Layout	110
4.7	The Unix File System	112
4.8	Conclusions	118
Problems and Exercises		122
Problems	122
5	Software Installation and Package Management	126
5.1	Introduction	126
5.2	Types of Software	128
5.2.1	Up and down the software stack	128
5.2.2	Operating System vs. System Software vs. Third Party Software	131
5.3	File System Layout	133
5.4	OS Installation	137
5.4.1	Identifying server requirements	137
5.4.2	OS Installation Overview	139
5.4.3	OS Installation Details	142
5.5	Package Management Systems	146
5.5.1	“Manual” Software Installation	147
5.5.2	Software Installation by Package Manager	149
5.5.3	Inherent Security Risks	152
5.6	Managing Software Updates and Patches	154
5.7	Conclusions	158
Problems and Exercises		160
Problems	160
6	Of Users and Groups	164
6.1	Introduction	164
6.2	Types of Users	165
6.3	Groups of Users	167
6.4	User Authentication	170
6.4.1	The Problem with Passwords	171

6.4.2	Sharing root	173
6.5	Summary	174
Problems and Exercises		177
Problems	177
7	Configuration Management	180
7.1	Introduction	180
7.2	Services, not Single Points of Failure	183
7.3	Defining Services and Requirements	184
7.3.1	Example Service: Syslog	185
7.3.2	Example Requirements: LDAP Client Configuration	185
7.3.3	CM Requirements	186
7.4	Of States and Sets	189
7.4.1	States	190
7.4.2	Sets	192
7.5	Fighting entropy	196
7.5.1	Deployment roles	196
7.5.2	Idempotence and Convergence	199
7.5.3	Quis custodiet ipsos custodes?	202
7.6	Summary	203
Problems and Exercises		209
Problems	209
8	Automation	213
8.1	Introduction	213
8.2	Of Laziness And Other Virtues	214
8.3	Benefits of Automation	216
8.3.1	Repeatability	216
8.3.2	Reliability	217
8.3.3	Flexibility	219
8.4	Who benefits from automation?	220
8.4.1	Ourselves	220
8.4.2	Our Peers	221
8.4.3	All Users	222
8.5	Levels of Automation	222
8.6	Automation Pitfalls	224

8.6.1	Increased Complexity and Impact	225
8.6.2	Loss of Audit Trail	226
8.6.3	Loss of Accountability	227
8.6.4	Safeguards	228
8.7	Summary	230
Problems and Exercises		233
	Problems	233
9	Building Scalable Tools	236
9.1	Introduction	236
9.2	How Software evolves	237
9.2.1	Scripts	239
9.2.2	Programs	240
9.2.3	Software Products	242
9.3	Principles of Developing Robust System Tools	243
9.3.1	Unix Philosophy and User Interface	244
9.3.2	Principle of Least Astonishment	250
9.3.3	Explicit and predictable failure	251
9.3.4	There's no such thing as a temporary solution.	252
9.3.5	Readability counts	253
9.3.6	Of Buses and Windows	254
9.4	Additional Guidelines	257
9.5	Summary	259
Problems and Exercises		261
	Problems	261
10	Networking	265
11	Security	266
III	Managing Complex Services	267
12	Managing System Services	269
13	Backup, Failover, and Disaster Recovery	270
13.1	File System Backups and Snapshots	270

<i>CONTENTS</i>	6
14 Monitoring and Visibility	271
IV Meta Matter	272
15 Everything We Haven't Covered	274
16 Ethics and Legal Issues	275
17 Future Direction of System Administration	276
Glossary of Terms	277
A Image Attributions	278
Index	280

Listings

1	Sample command-line invocations	vi
2.1	Simple I/O redirection in the shell	39
2.2	Simple job control in the shell	42
2.3	2-clause BSD license	49
4.1	<code>fdisk(8)</code> sample invocation and output on a Linux system . . .	94
4.2	<code>disklabel(8)</code> invocation and output on a NetBSD system . . .	96
4.3	Absolute and relative pathnames	112
4.4	Output of <code>ls -ai</code>	115
4.5	Output of <code>stat(1)</code>	117
5.1	Excerpt of the <code>hier(7)</code> manual page	134
5.2	Commands used during the installation of NetBSD	145
5.3	<code>rpm/yum</code> sample commands	150
5.4	<code>pkgsrc</code> sample commands	151
6.1	Excerpt of a typical <code>/etc/passwd</code> file on a NetBSD system . .	166
7.1	Excerpt of a Puppet “manifest” defining the ‘syslog’ service. .	206
7.2	Excerpt of an LDAP client authentication Chef “recipe” . . .	207
7.3	A CFEngine “agent bundle”	208
7.4	Idempotent and non-idempotent commands.	208
8.1	Script to build GCC on an old IRIX system	217
8.2	A second iteration of our <code>gcc(1)</code> building utility	232
9.1	The Zen of Python	245
9.2	<code>rc(8)</code> key=value pair configuration	249
9.3	Code Sample: Simple is better than complex	254

List of Figures

1.1	Anthora Coffee Cup	2
1.2	An IBM 704 mainframe	22
2.1	Unix genealogy tree	34
2.2	Standard streams in a simple pipeline	41
2.3	Different systems running Unix	45
4.1	Direct Attached Storage	77
4.2	Three hosts using Network Attached Storage, or <i>NAS</i>	79
4.3	NAS and SAN Hardware	81
4.4	SAN illustrated	82
4.5	Cloud Storage	85
4.6	HDD vs. SSD	87
4.7	Physical Disk Structure	91
4.8	Logical Volume Management	98
4.9	RAID Levels illustrated	101
4.10	Apple Xserve RAID	103
4.10	File System Hierarchy	111
4.11	UFS Details	113
4.12	File Metadata	118
5.1	Types of Software	132
5.2	OpenSolaris Installation	138
5.3	Software Dependency Tree	153
6.1	User Mappings	168
7.1	Host States in Configuration Management	191
7.2	Sets of changes applied to sets of hosts	194

LIST OF FIGURES

9

7.3 Host Deployment Roles as Sets 197
